

HEALTHAPP AUTOMATION

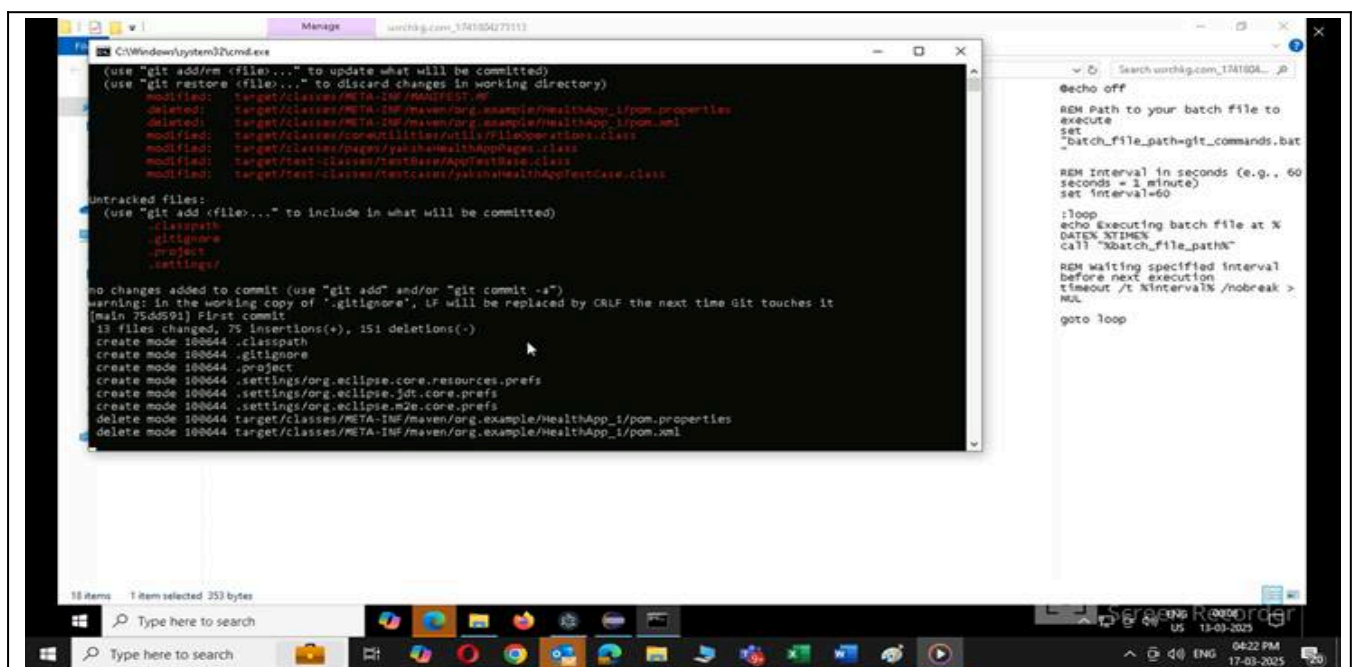

OPERATION THEATRE PL2-(9TCs)

Pre-requisite:

Before you start working on your project, execute the runner file present in your project folder (Simply by double click). **This is mandatory.**

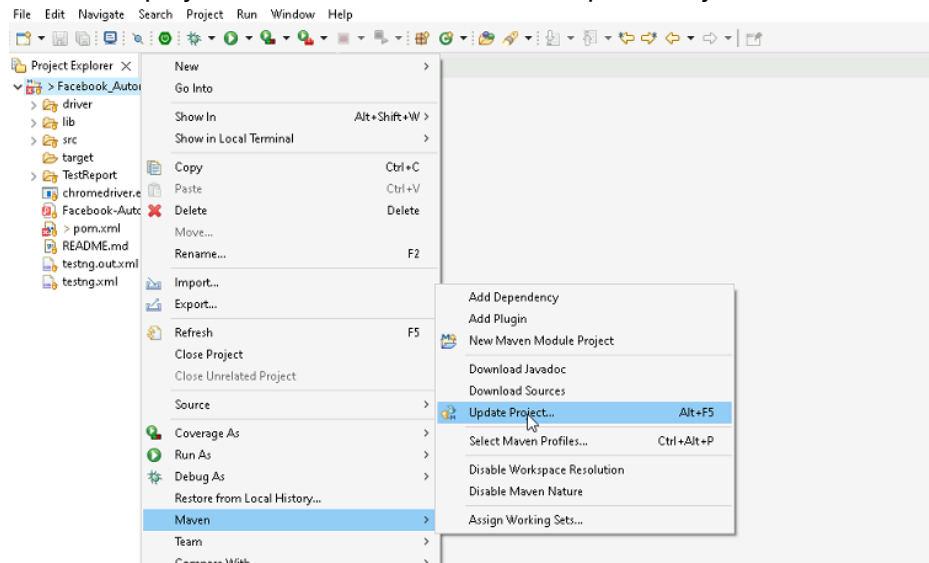

This will launch a command terminal for you where it will keep on pushing your updated code to GIT at regular intervals. Keep that command terminal open at the backend and you can continue working on your project.

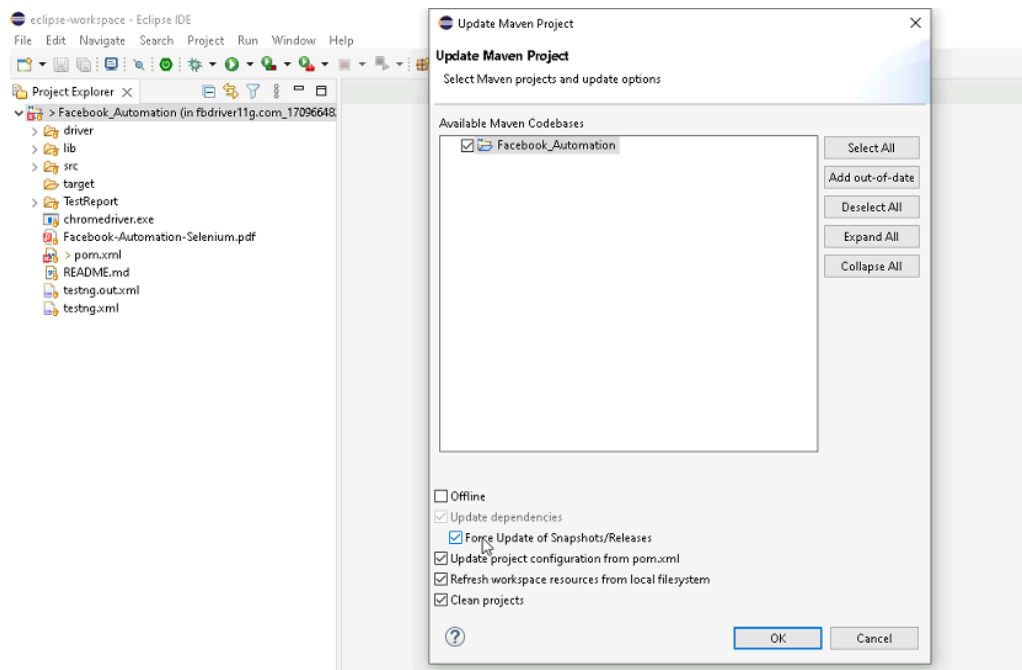

As soon as you import the project into Eclipse, update the project using the Maven update option as below. This is to resolve the issue if any Maven dependency is not downloaded properly:

1. Right-click on the project: Go to “Maven” and select “Update Project”

2. In the Update Maven Project Box, Select “Force Update of Snapshots/Releases” and click OK

Template Code Structure:

- a. Below are the packages and files you will be required to work on.
- b. Other Files and packages you can ignore.
- c. In other Files and packages, do not make any changes. It would affect your evaluation.
- d. You are not required to work in the “Test” Folder. Files there are non-editable. Editing those files and trying to save them will throw an error and affect your evaluation.

Package	Class/File	Description
src/main/java/coreUtilities/utis/	FileOperations.java	<ol style="list-style-type: none">1. It contains methods to read data from Excel files.2. The method is in templated form.3. You will be required to implement these methods as the very first activity, because even the URL to navigate to, is read using these methods.
/src/main/java/pages	operationTheatre_Pages.java	<ol style="list-style-type: none">1. All core activities (mentioned in the list “Key activities to Implement” below) are to be performed here.2. The comments associated with each templated method here describe the expectation.3. You can define locators and xpath here.4. Declare any variable/object you need to share data/status between different methods.5. Do not modify the signature of methods declared here.6. You can create additional supportive common methods in CommonEvents class.
/src/main/resources/	Config.xlsx	URL to navigate to are already defined here

/src/test/java/testdata/	expected_data.xlsx	Contains data to fill in the form
/src/main/java/coreUtilities/utlis	CommonEvents.java	<ol style="list-style-type: none"> 1. Contains all common activities. 2. Certain templated common methods are declared here. 3. You implement them as per your needs. 4. You can add any additional method for common activity here
	Testng.xml	Execution needs to kick-started from TestNG.xml

PROBLEM STATEMENT

Need to automate the following activities using Selenium + Java.

Key Activities to implement:

Sl No.	Summary	Action	Expected Result
1	Ensure the Title & URL of the home page.	<ol style="list-style-type: none"> 1. Go to the URL: https://healthapp.yaksha.com/ 2. Log in with a valid credential (username: admin, password: pass123) and click on the "Sign In" Button 	<p>The title should be: DanpheHealth.</p> <p>The URL should be: https://healthapp.yaksha.com/Home/Index#/</p>
2	Confirm the presence of the OperationTheatre module.	<p>Preconditions: The user must be logged in.</p> <p>Steps:</p> <ol style="list-style-type: none"> 1. Click the OperationTheatre module. 	Verify that by clicking the module, the user should be redirected to the appropriate page. The "Hospital Number" (Header of the first column of the table displayed below the search box) should be visible in the designated table on the Operation Theatre page.
3	Ensure that the "New OT Booking" button is present on the OperationTheatre page and that clicking it opens the "Booking OT Schedule New Patient" form.	<p>Preconditions: The user must be logged in and should be on the "Operation Theatre" Module.</p> <p>Steps:</p> <ol style="list-style-type: none"> 1. Click the "New OT Booking" button. 	Verify the title of the pop-up form opened by clicking the button. It should be "Booking OT Schedule New Patient".
4	Ensure the presence of necessary textboxes on the "Booking OT Schedule New Patient" form and confirm the accuracy of data entry.	<p>Preconditions: The user must be logged into the system and have navigated to the "Booking OT Schedule New Patient" form.</p> <p>Steps:(use "operationTheatreModule" sheet of Expected_Data.xlsx to fetch and fill the details in the form)</p> <ol style="list-style-type: none"> 1. Fetch and enter data into the "Select Patient" 2. Fetch and enter data into the "Diagnosis" textbox. 3. Fetch and enter the "Type of Surgery" into the corresponding textbox. 	Verify that the value entered into the "Select Patient" is filled properly.

5	Ensure the Placeholder value of the "Remarks" textbox is "Remarks".	<p>Preconditions: The user must be logged into the system and present on the "Booking OT Schedule New Patient" form.</p> <p>Steps : (No explicit steps here)</p>	<p>Verify the Placeholder value of the "Remarks" textbox should be "Remarks".</p> <p>Hint: The Placeholder value is the greyed text displayed inside the textbox, which disappears when the user clicks and starts inputting the value.</p>
6	Ensure that entering "Dr. Pooja Mishra" in the surgeon name field triggers the appearance of the corresponding button on the form just below the "Surgeon Name" text field.	<p>Preconditions: The user must be logged into the system and on the "Booking OT Schedule New Patient" form.</p> <p>Steps:(use "operationTheatreModule" sheet of Expected_Data.xlsx to fetch and fill the details in the form).</p> <ol style="list-style-type: none"> 1. Fetch and enter "Dr. pooja" into the surgeon name text field. 2. Choose the value from the dropdown. 	Verify that a button with "Dr. Pooja Mishra" should dynamically appear below the Surgeon Name text field.
7	Ensure that upon clicking the "External?" checkbox, a button with "+" symbol appears next to the checkbox.	<p>Preconditions: The user must be logged into the system and positioned on the "Booking OT Schedule New Patient" form.</p> <p>Steps:</p> <ol style="list-style-type: none"> 1. Click on the "External?" checkbox to change its state to selected. 	Verify that upon clicking the "External?" checkbox, a button with a "+" symbol should dynamically appear next to the "External?" checkbox,
8	Ensure that attempting to submit the "Add External Referral" form without entering the required information triggers an appropriate error message.	<p>Preconditions: The user must be logged into the system and on the "Booking OT Schedule New Patient" form. As well as the "External?" checkbox must be selected.</p> <p>Steps:</p> <ol style="list-style-type: none"> 1. Click on the "+" icon to open the "Add External Referral" form. 2. Click on the "Add" button on the "Add External Referral" form without entering any information. 	Verify. The error message should be: Referrer Name is required.
9	Ensure the success message is "Success update".	<p>Preconditions: The user must be on the "Add External Referral" form.</p> <p>Steps: (use "addExternalReferralPageInfo" sheet of Expected_Data.xlsx to fetch and fill the details in the form).</p> <ol style="list-style-type: none"> 1. Fetch and enter "Referrer Name" into the Referrer Name text field. 2. Fetch and enter "Address" into the Address text field. 3. Fetch and enter "Contact Number" into the Contact Number text field. 4. Fetch and enter "Email" into the Email text field. 5. Select the "Is Incentive Applicable" checkboxes. 6. Click on the "Add" button 	Verify that the success message should be "Success update".

NOTE: "Please do not delete any file in the src folder. But you are free to add any other file".

Expectations:

- 1) Learners should write automation scripts using Java and Selenium to automate all the steps in the above question. In other words, the automation script should perform all the

mentioned steps.

- 2) Learners should not use any tools to create the xpath. They should develop the xpath/cssselector on their own.

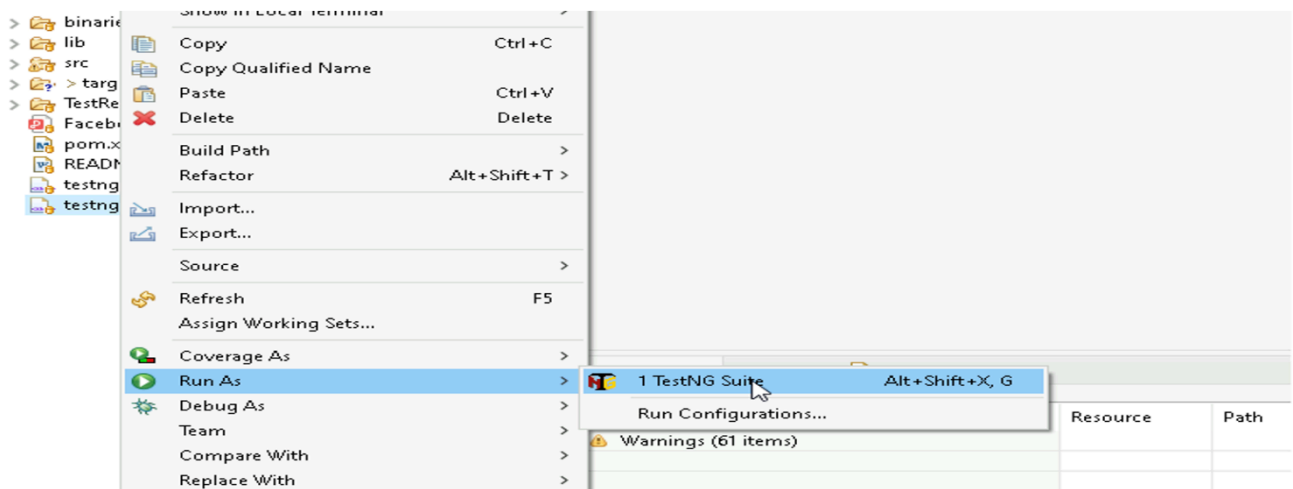

IMPLEMENTATION/FUNCTIONAL REQUIREMENT

1.1 CODE QUALITY/OPTIMIZATIONS

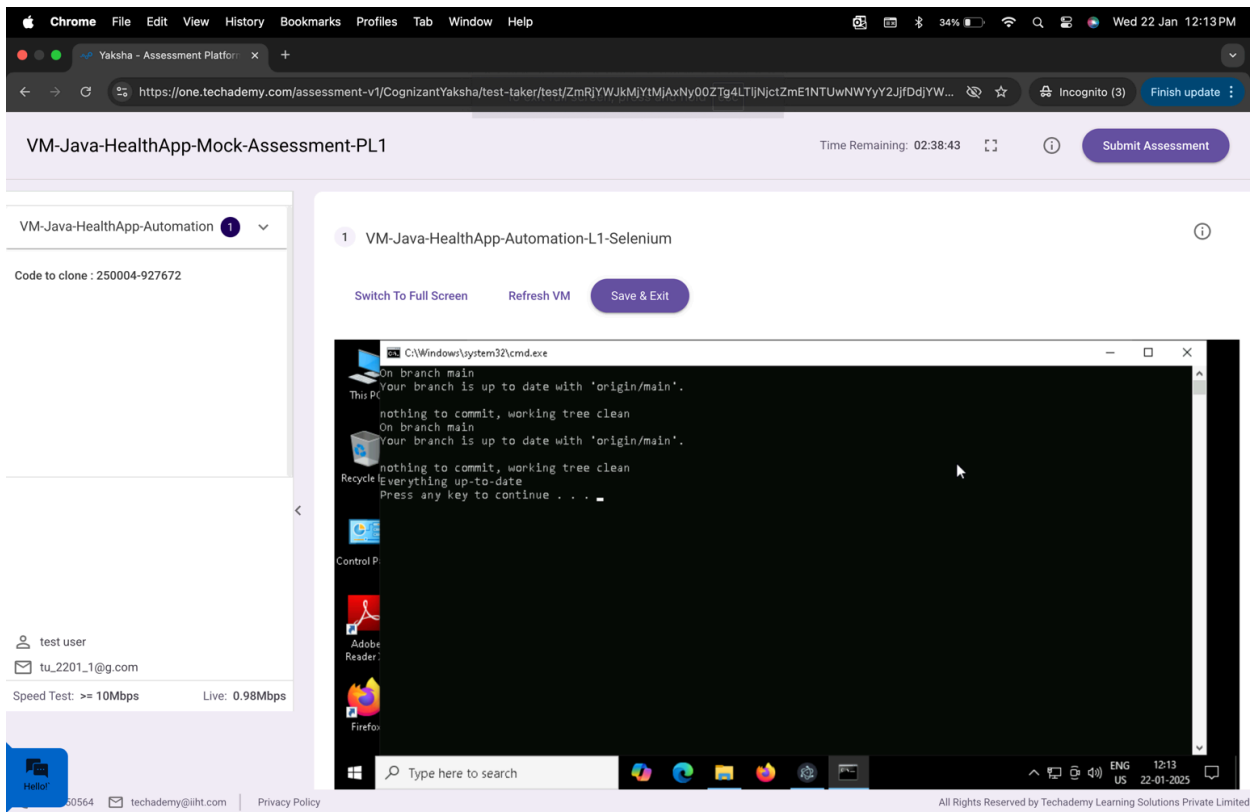

1. Associates should have written clean code that is readable.
2. Associates need to follow SOLID programming principles.

EXECUTION STEPS TO FOLLOW

1. You are required to test cases for applications before final submission. Without this project, evaluation would not have happened.
2. You can launch test cases any time as follows: Right-click on testng.xml and run TestNGSuite.

3. To do the final submission of the assessment :
 - a. Press escape to come out of Fullscreen mode.
 - b. Submit the assessment.

After the successful submission of the assessment, you will get a confirmation message displayed on your screen.

=====

All the Best
